

Different parameters for Random Forest

S.no	Parameter 1	Parameter 2	Values
1	n-estimator = 50	Randomstate	0.944633639431341
2	n-estimator = 50	Criterion = squared error	0.9424443933757848
3	n-estimator = 50	Criterion = absolute error	0.9314904667305787
4	n-estimator = 50	Criterion = poisson	0.9394401327638452
5	n-estimator = 100	Randomstate = 0	0.9460043548938504
6	n-estimator = 100	Criterion = squared error	0.9437404124498008
7	n-estimator = 100	Criterion = 'absolute_error'	0.9392721466199868
8	n-estimator = 100	Criterion = 'poisson'	0.9380136858936743

Out of 8 different combination parameters n-estimator =100, randomstate = 0 gives better output **0.9460043548938504**
