

AdaBoost Algorithm value

Sl.no	Parameter 1	Parameter 2	R_score value
1	n_estimator = 100	Randomstate = 0	0.8200656241397054
2	n_estimator = 50	Randomstate = 0	0.8200656241397054
3	n_estimator = 100	learning_rate = 1.0	0.8838428068364165
4	n_estimator = 100	loss = 'linear'	0.823151353266581
5	n_estimator = 50	learning_rate = 1.0	0.880858245580892
6	n_estimator = 50	loss = 'linear'	0.8781703463896813

Sl.no	Parameter 1	Parameter 2	Parameter 3	R_score value
1	n-estimator = 50	Learning rate = 1.0	random_state = 0	0.8200656241397054
2	n-estimator = 50	loss= 'linear	random_state = 0	0.8200656241397054
3	N_estimator = 100	loss= 'linear	random_state = 0	0.8200656241397054
4	n-estimator = 100	Learning rate = 1.0	random_state = 0	0.8200656241397054

r

The combination of n_estimator = 100, learning_rate = 1.0 gives higher r_score value **0.8838428068364165**
