

LG boosting algorithm values

Sl.no	Parameter 1	Learning rate	N_estimator	R_score value
1	Loss = Squared error	0.1	100	0.9363350676905242
2	Loss = Absolute_error	0.1	100	0.9286541823666057
3	Loss = Huber	0.1	100	0.9451808074868682
4	Loss = Quantile	0.1	100	0.6349848653624428
5	Criterion = firedman_mse	0.1	100	0.9363350676905242
6	Criterion = squared error	0.1	100	0.9363350676905242
7	Criterion = squared error	0.1	50	0.9351835972198393
8	Criterion = firedman_mse	0.1	50	0.9351835972198393
9	Loss = Squared error	0.1	50	0.9351835972198393
10	Loss = Absolute_error	0.1	50	0.9217101854437213
11	Loss = Huber	0.1	50	0.9469994839961832
12	Loss = Quantile	0.1	50	0.5987360869380283

Out of 12 parameter combination, loss= huber, learning rate = 0.1, n_estimator = 50 gives highest rscore value = **0.9469994839961832**
